

Sue Parker

Sue is the founder and driving force of Equine Body Therapy (EBT) <http://equinebodytherapy.com/about-equine-body-therapy/>

Sue has several qualifications in remedial therapies which have led to the development of the EBT START (Soft Tissue Assessment and Response Testing) Program.

Sue has worked with over 10,000 horses as an equine body therapist in the past 15+ years, including running rehabilitation programs under veterinary supervision. With the extensive knowledge gathered through the years, Sue decided it was time to start to teach trainers and horse owners about what they can do with their horses to prevent injuries and improve the healing time for those injuries that have already occurred.

Over this time she realised that it was essential to assess the horse's whole body effectively before carrying out treatment; this led to a dramatic improvement in noticeable results. This in turn led to the development of a structured methodology and education program called Equine Body Therapy START (Soft Tissue Assessment and Response Testing) program. EBT START is a unique way of carrying out systematic and sequential assessment checks to provide specific indicators to soft tissue and skeletal problems.

Equine Body Therapy is now a registered therapy and listed on the International Institute of Complementary Therapies as a 'trainer provider'.

The best part of the EBT START program is that it enables early detection, before a general soreness becomes a long-term injury.
